MONTANA HIGHWAY PLANNING SURVEY

MONTANA FEDERAL AID SYSTEM

PREFACE TO ROAD LOG

The following tables are intended to show the Montana Federal Aid System by routes. These mileages have been computed for use to determine route lengths, construction lengths and maintenance lengths. All data included is taken as of the date of the tables, January 1, 1939. The following notes will explain:

Column 1 is to identify counties, cities and other pertinent points through which the routes pass.

Column 2 is for project designation. It also shows under what authority each section of the route was constructed.

Column 3 is used for reference of explanatory notes.

a - project constructed
b - project under construction or reconstruction
d - survey
e - estimated
f - Planning Survey road inventory
Y & T - See accompanying diagrams on Page 2 & 3 of 29

Other explanatory notes shall be found at the end of each route.

Column 4 is the route or center line length of each project and is explained on Page 2&3 of 29

Column 5 is the actual construction length along the route.

Column 6 shows the unimproved mileage. This mileage, as shown, is generally county or city built road that is not constructed to any State standard.

Column 7 shows additional Wyes at Junctions, which are to be added to figures in Column 5 to derive total construction and maintenance lengths.

Column 8 is used to show the difference in mileage between the present traveled way and the proposed alignment. The totals in this column, when subtracted from totals in Column 4 will give the proposed length of each route.

Columns 9-10-11-12-13-14-15 show the administrative area upon which separate sections are constructed.

Column 16 tabulates mileage where two separate routes traverse the same alignment. When one route coincides with another bearing a smaller number the mileage shown in this column is to be subtracted from the total route length to give the net route length.

Column 17 is accumulated route mileage along the route to be used in computing distance between various cities or other points.

The totals of Columns 5, 6 & 7 should equal the totals of Columns 9 to 15 inclusive, and show only construction length as of the date of the Log.

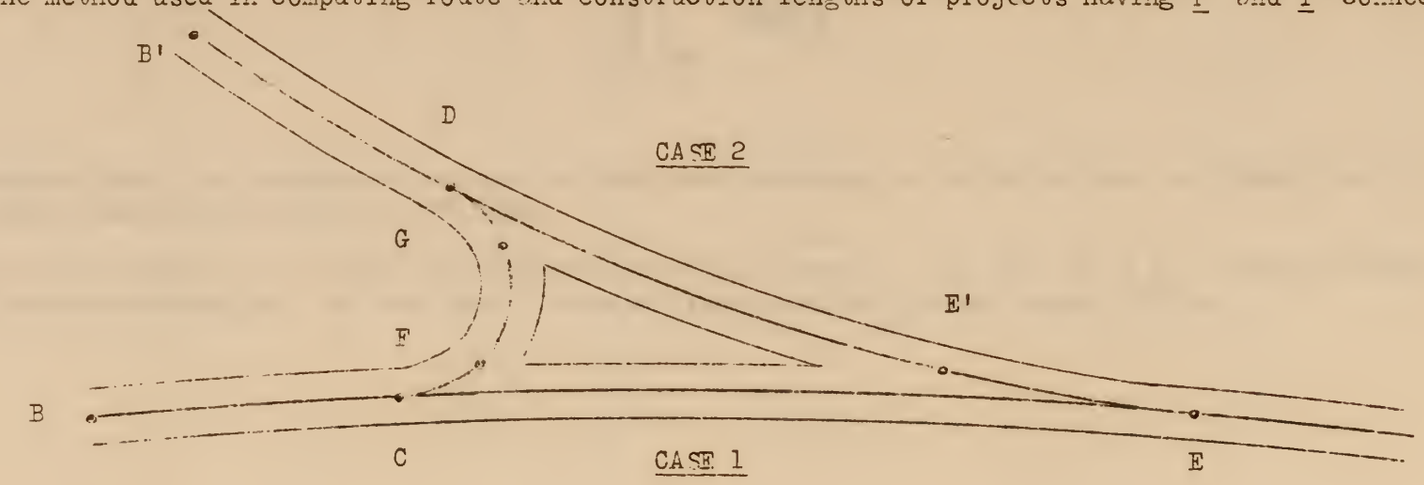
Page 4 of the Preface is a summary of construction lengths by routes, showing by whom constructed. Column 7 shows total improved mileage. Column 8 shows proposed construction as of January 1, 1939, necessary to make the total in Column 9.

Page 5 of the Preface is a tabulation of proposed changes and the net result when they have been made, giving the net mileage for various areas, as Municipal, National Forest, etc.

Pages 6-13 inclusive, summarize the various routes by counties, showing the number of miles of each route in each county.

Pages 14-15 summarize by routes.

Y & T as noted in Remarks Column, or Column 3 of the Road Log, have reference to the diagrams noted Y Connection and T Connection and which, by the following notes, explain the method used in computing route and construction lengths of projects having Y and T connections, for example:

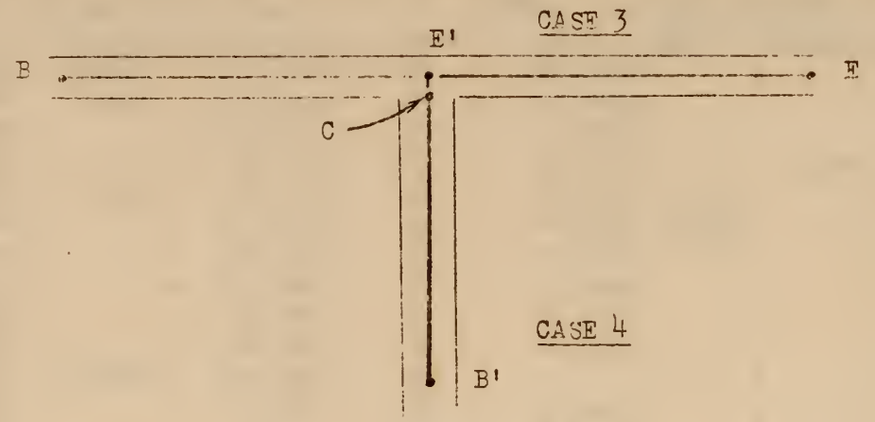


Y CONNECTION

Case No. 1 The distance along center line of highway from beginning to end of project or from B to E , the latter point being the junction or intersection point of highways was computed as a route and construction length and mileage in route and construction column should be the same. Additional wye was computed from C & D center line to center line tie and length is shown in additional wye column.

Case No. 2 The distance along center line of highway from beginning to end of the project, or from B' to E as in Case No. 1 shall be computed as route length. The construction length is from B' to E'; E' being end of project and ending on shoulder line of B & E. Thus route and construction lengths in respective columns of Road Log shall differ.

Additional wye was computed from F to G or shoulder to shoulder construction only and length is shown on additional wye column.



Case No. 3 Mainly used at street intersections, the distance along center line from beginning to end of project, or from B to E or E' was computed as route and construction length and mileage should be the same.

Case No. 4 From B' to E' ; E' being center line tie, distance was computed for route length. From B' to C ; C being shoulder line or end of construction, construction length was computed. In this case, route and construction mileage should differ.

The following tables are a tabulation of projects on other State roads, commonly known as Feeder Roads and Isolated Roads.

Page 17 of 29 is a road log of the West Gallatin Highway and a portion of U. S. Highway No. 191.

Pages 18, 19, 20, 21, and 22 tabulate projects on other State roads, with a summary on page 22 of 29, which includes the West Gallatin Highway.

The other State roads or Feeder Roads, are those which were financed as National Recovery Highways. Included in this group are some Federal Aid projects which are at the present off of the Primary System and now serve as Feeder Roads.

Isolated Roads, pages 23, 24, and 25 of 29, are in general Works Program Secondary off 7% System and are not included as Primary or Feeder Roads. Although some were financed as the above but were built in Municipalities.

	Proposed		713.755													

1. New surveys for reconstruction of FHP 8 B, FAP 183 A, and FAP 183 B, shorten the route and construction lengths.
2. The 0.500 miles represents the County road now in use, to be replaced by FHP 8-0 - 0.235 miles.
3. The present junction of Routes 2 & 11 is at the underpass in Livingston. The proposed junction is 5.6 miles east of that point.
4. The routing shown is along the present 53 A. The proposed route used for the difference is that used in the 1937 Road Log.
5. An overpass now under construction lengthens the route 0.004 miles.
6. The road logged is the present used route, City Construction and State Oiled. It is to be replaced by FAP 135 F.

A - Total construction length 1.866 miles - 0.746 miles on Route 3 - 0.378 miles on Route 10.

1 - The proposed routing is coincident with Route 2 from Livingston to a point 5.6 miles east of the Livingston Underpass. The new construction of FAP 60 ABC will shorten the net length of Route 11, 5.730 miles.

2 - Reconstruction of this section shortens FHP 32 E - 0.567 miles.

3 - The present road in Belt, using FAP 72 is 0.195 miles longer than the proposed length.

4 - Proposed reconstruction shortens the route 0.001 miles and adds a Wye 0.229 miles long to Route 41.

* - 3.227 miles of this, in Neihart, is also shown in National Forest Column.
